

Abstract

A digital photo frame comprises a storage unit for storing various picture data and music data. A built-in control software can be used to select a matching music and a matching digital outer frame pattern for each picture.

- 5 When displaying a different picture, the matching music can be played and the matching digital outer frame pattern can be displayed automatically. Through the sound recording function, a matching music can be recorded for each picture. The alarm clock function and the radio reception function can also be added into this digital photo frame. With the control software, the time display
- 10 format and position can be set. The music to be played can also be selected for the alarm clock. Through the digital photo frame, a user can select the picture and the outer frame pattern to be displayed and the music to be played according to his mood and liking.
